

Create methods for  $\times$ ,  $\div$ ,  $-$ ,  $+$   
then Pass my detached expression  
into it

That's really all my  
Plan (Return the ans to  
detached Expression)

an example of this is the  
add method

```
Public static String add (Int numA, Int denA,  
int numb, Int denb)
```

```
Int sumNum = numA  $\times$  denB + numB  $\times$  denA
```

```
Int sumDen = denA  $\times$  denB
```

```
Return (sumNum, sumDen)
```

✓  
ganna be doing the same  
with  $\times, \div, -$
