Plan

Part A → <u>Int</u>

- Make a <u>Variable</u> that counts numbers of tosses
- Make a loop from zero to the variable that holds numbers of tosses
- Make array then fill it

Part b

- Create a variable that holds max length and = it to 0
- Make a for loop that goes

through the array
- make another variable called
Counter and equal it to
0
- Compare number (one) to
number (two)
- If one = two Counter ++
- Compare Counter to
first variable (If greater
first Variable = Counter)
(else Counter == 0; return
-1)
